

Configuring your American Audio DP2 with Virtual DJ using an Apple Computer

If you are having trouble with Virtual DJ not recognizing your American Audio DP2 on you Mac. Please follow these guidelines.

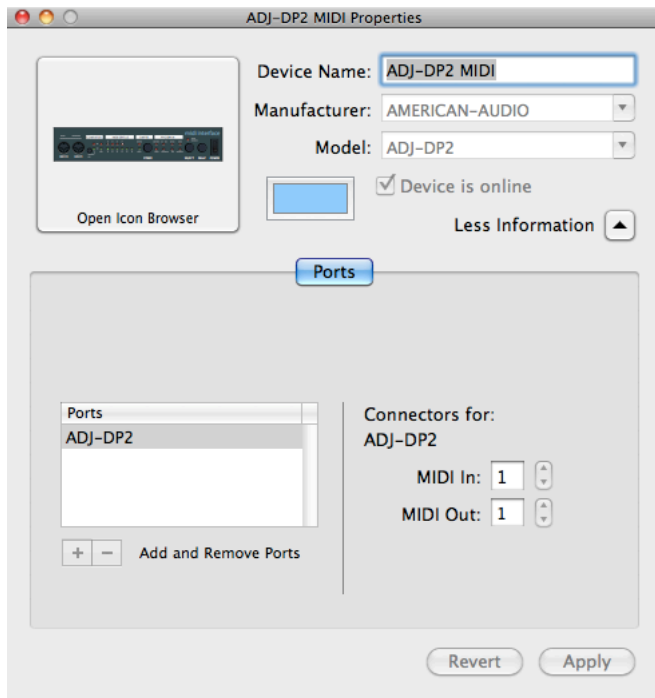

1. Open the Audio MIDI setup utility under applications utilities or by searching for it in finder or spotlight.

2. Open the MIDI Window under the Audio MIDI setup program.

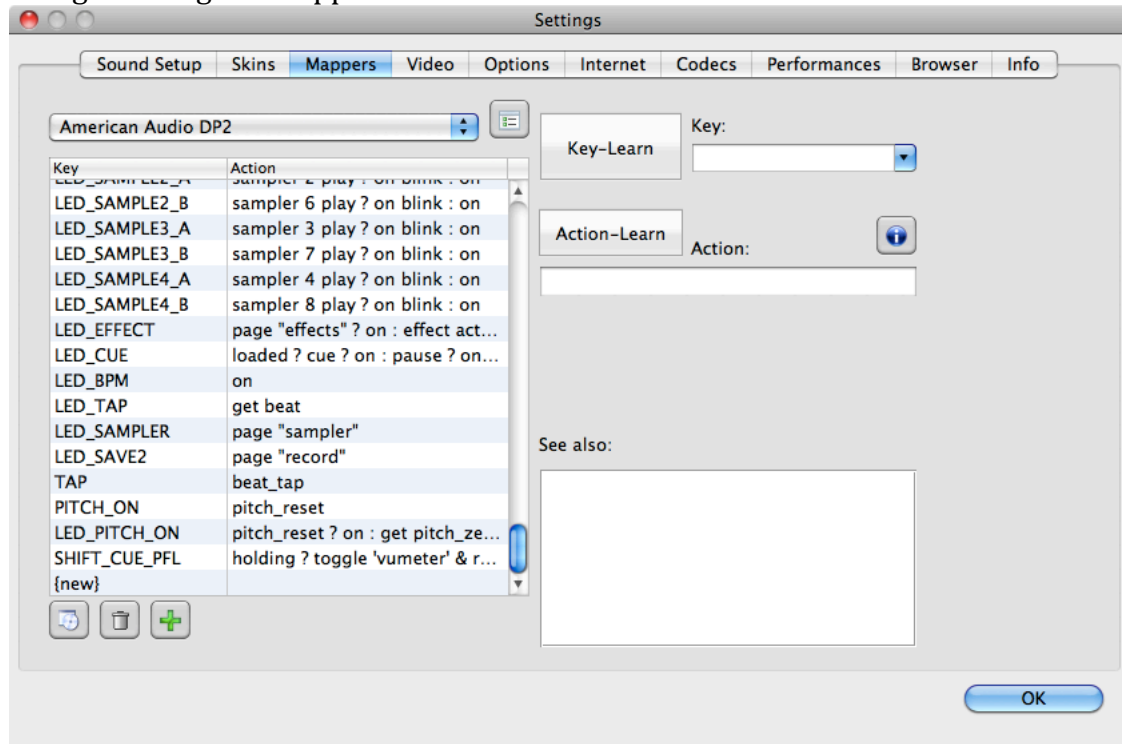

3. If your DP2 show up as shown this is the reason why your DP2 is not picked up on Virtual DJ. Double click on the ADJ-DP2 under the MIDI studio window, when the device window opens under device name change the name to ADJ-DP2 MIDI. Now click apply. Close Audio MIDI set up.

Continue on page 3.

4. You can now open virtual DJ 6 and it will be detected. To confirm under configuration go to mappers.

If you require further assistance, please contact the American Audio Support Team.
